## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

**Claims 1-3 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Ota et al [USPAT 6,027,253].**

Ota et al disclose an optical fiber array comprising a first V-grooves [end parts of grooves], a second V-grooves [see fig. 2, and 5], and a stress-reduction depth portion 11.

Note that the claimed method of forming the device, such as etching, is not germane to the issue of patentability of the device itself. Therefore this limitation has not given any patentable weight.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

**Claim 4 is rejected under 35 U.S.C. 102(e) as being clearly anticipated by Uno et al [USPAT 6,240,235].**

Uno et al disclose an optical fiber fixing member comprising grooves 51, stress-reduction-depth portion 11 [fig. 7], and alignment grooves 122 [fig. 17] having different depth from the grooves of 121. Uno et al teach at column 30, lines 11-20 that the molding parts can be done by mechanical process or etching process.

The claimed method steps are inherently shown in the Uno et al's reference.

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Further references of interest are cited on Form PLO-892, which is attachment to this office action.
